

December 6th Agenda

Attendees

Markas Aišparas
Gayeon Jee - Notetaker
Maria Mihai - Leader
Jakub Patałuch
Rogacka-Trojak, Zofia
Andrei Simionescu

Points to discuss

- Draft of Assignment 1.
- Beginning of implementation, potential technical issues (important to make sure that everyone can start coding right away).
- First sprint, assigning tasks.

Questions

- Messaging microservice: Is it better to implement it such that it returns a messaging object that the Planner microservice can use, or such that it receives an email address and a message to deliver and independently performs the delivery of the message?
- Is it necessary to duplicate the files from the example-microservice modules, or is there some automatization for creating new modules?

Possible tasks to discuss in Scrum planning

- Class diagram
- Creating classes and interfaces for every microservice, according to the class diagram.
- Creating API's.
